More than 30 years of innovations

For more than three decades, transport constructions, not only in the Czech Republic, have been drained by professional VLČEK systems that have become a technical standard and a household name in the area of traffic engineering. Our registered trademarks bearing the names of selected European rivers are a common and significant characteristic that committed our products to memory of our business partners in many countries. The company's distinctive attributes include professional approach, high quality of our products, customer support, continuous innovation of our products and perfection in detail.

Many years of our employees' experience guarantee professional use of products when designing technical solutions. All our products are regularly tested by several accredited laboratories. The benchmark for success is many satisfied design, construction and trading companies on the domestic market as well as abroad. VLČEK SOLUTION Ltd. has received several awards in the area of transport construction and holds the quality management system certificate CSN EN ISO 9001:2016.

SINCE 1992

Product portfolio

The company's portfolio includes dozens of types of gullies, manhole covers, gratings and dirt catchers.

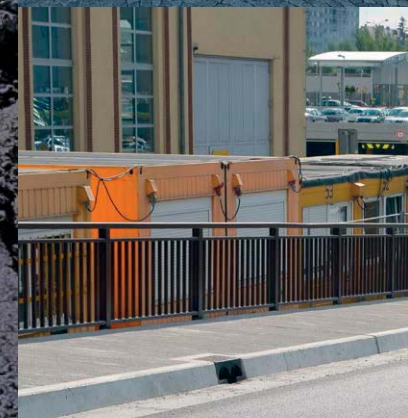

To cover manholes, we produce and continuously expand our product lines of cast-iron square manhole covers.

For road drainage, gratings of curb gullies are rightly popular with investors, developers and designers, not only for their efficiency and simplicity of design, but also for the professional service during the design and implementation.

The main pillar of the company's portfolio is the bridge drainage system which is subject to constant innovations reflecting the requirements for construction of new and reconstructed bridges. Drains allow smooth vertical and lateral rectification, drainage of road surfacing layers, including insulation, contain anti-theft features and thanks to the outlet variability, they can be used for new as well as reconstructed concrete, steel and stone bridge structures.

Awards:

- Bridge drains VLČEK® have received the following awards: 2 gold medals at the International Building and Construction Trade Fair (1999, 2000)
- 1 medal for Innovations in the Czech Republic (2001)
- 2 medals for the Best Expositions (2001, 2023)

Customer support

A priority of the company VLČEK SOLUTION Ltd. is to take care of its customers and provide them with maximum support, including professional advice during designing, preparation and implementation of bridge and road drainage. Technical and support documentation is available at the company's website. The company cooperates closely with universities and investment, project and developer organizations, and is also engaged in the compilation of technical standards and regulations in several European countries.

"VLČEK-KOGA" association

In 2014, the "VLČEK-KOGA" association started manufacturing and distributing innovated bridge drains which broke it through quickly in projects in the Czech Republic as well as abroad thanks to their new design. The "VLČEK-KOGA" association offers comprehensive services, including professional design, production, delivery and installation of the bridge drainage piping system.
